

2004 REGISTRATIONS

Thanks, to all who took the time to register cultivars in 2004. There were 238 registrations for 2004. There are a total of 3227 registered hostas. An updated index is included with this year's new registrations. Registrations are established when printed in a publication that reaches the general public. Other communications, including electronic media, are not considered valid for epithet establishment under the International Code of Nomenclature.

The simplified form introduced in June of 1998 resulted in some wide variation in the detail of cultivar descriptions. One significant difference was in the dimensions of the "plant". Part of the simplification was to give registrants the option to place their cultivar in a more general category rather than give the specific dimensions. These categories (miniature, small, medium, large, and giant) are somewhat arbitrary. Because of this, dimensional measurements have been utilized when provided, understanding that they reflect clump size at the age recorded.

Under parentage information (found within the brackets) the category of "parentage unknown" was added in 1997. As is consistent with the registrar's policy of not adding further to the confusion of the nomenclatural soup, this category is used when the parentage information submitted by the registrant contradicts information already in print. "Parentage undetermined" does not imply anything regarding the validity of either existing published information or information submitted by the registrant, only that an inconsistency exists. Parentage information published with registrations is intended to be "known parentage" as opposed to guesses, educated or otherwise. The abbreviation t.c. is used to indicate "tissue culture".

Brief Key to Descriptions: ONIR: O=originator, N=nominant (Namer), I=introducer, R=registrant.

Flowers: Bloom periods are given in either start – peak – finish format or a more general period format. The general periods are very early period: before June 1, average period: June 1 – July 15, summer period: July 15 to August 15, late period: August 15 to October 1, very late period: after October 1.

Bloom Period Codes: Ties the flowering of the cultivar to a "species scale". The registrant has provided the number code from the scale below for the start - peak - finish of the flowering period.

1	2	3	4	5	6	7	8	9
----- ----- ----- ----- -----								
H. sieboldiana			H. ventricosa		H. plantaginea		H. 'Tardiflora'	

Forms: Registration forms are available from the registrar, or may be obtained on the Internet at: <http://www.hosta.org/> or at: <http://hostalibrary.org/>. I welcome inquiries regarding availability or validity of names in advance of the formal submission on registration request forms.

Corrections: 2003 registration: 'Blue My Mind' should be H. Hansen (R), H. Gowen (O,N,I).

Code revision 2004: Article 32.II. "For purposes of consistency, . . . when . . . that abbreviation is an acronym. . . or a contraction of a word. . . the period is not applied." Thus, Dr., Mr., Mrs., etc. become: Dr, Mr, Mrs, etc. The follow registered cultivar epithet are impacted and changed as follows: 'Mrs Minky', 'Rosedale Mr Blue Jeans' and 'Rosedale Mrs President'.

Code revision 2004: Article 31.3 "Transcription of Japanese characters (ideographic Kanji or phonetic Hiragana and Katakana) into a script employing the Roman alphabet (Romaji) must be by the modified Hepburn system of Romanization as employed in *Kenkyusha's New Japanese-English Dictionary* (edition 3 and later) subject to the standardizations *imposed by the ALA-LC Romanization Tables*". The follow registered cultivar epithets are impacted and changed as follows: 'Midori-no-ya', 'Mikawa-no-yuki', 'Otome-no-ka' and 'Seto-no-aki'.

Thanks: The editing of Kevin P. Walek, W. George Schmid, Mark Zilis, and Warren Pollock is acknowledged and greatly appreciated. I am grateful to Lu Treadway Nelson for the use of her database. I greatly appreciate the support of The American Hosta Society and the many hybridizers and propagators who have benefited all of us who grow and enjoy hostas by registering their introductions. I was privileged to register 938 cultivars during my 4 years as registrar. I continue to believe that registration is a critically important scientific and educational responsibility of our society. My hope is to see data entry by the registrants over the internet, and a limited database of registered cultivars available on the net. There have been considerable revenues generated during my term as registrar which should be available to fund these efforts.

2004 REGISTRATIONS

H. 'A Big Splash' E. Elslager (ONIR)

Plant: 43 in. (109 cm) diameter, 32 in. (81 cm) high, upright, with a medium growth rate.

Leaf: 13.25 in. (34 cm) long, 9.5 in. (24 cm) wide; 15 prominent underneath pairs of veins; dark green with unstable streaks of light green, yellow, golden yellow, and greenish yellow with a slightly rippled margin and with a medium green, yellow edged petiole; slightly shiny on top and glaucous bloom underneath; moderately corrugated and moderately wavy, broadly ovate with a cordate base.

Scape: 35-39 in. (89-99 cm) in length; glaucous green; inflorescence leaves.

Flower: 1.9 in. (4.8 cm) long, pale lavender; tubular; Ann Arbor, MI: 7/2-7/16-7/26 (*codes: 3-4-4).

Seed: sets viable seeds; pod is green.

Clump History: orig. seedling, 7 years old, Ann Arbor, MI.

Notable Characteristics: large, splashed, heavy substanced and white backs.

[F-1 seedling of *H. 'Dorothy Benedict'*]

H. 'A Lady in Blue' E. Elslager (ONIR)

Plant: large sized, 18 in. (46 cm) diameter, 17 in. (43 cm) high, mound-like, with a slow growth rate.

Leaf: 7.75 in. (19.5 cm) long, 6.75 in. (17 cm) wide; 9 prominent underneath pairs of veins; intensely blue-green with a slightly rippled yellow 0.25-0.75 in. (0.6-1.9 cm) margin and with a glaucous green with yellow edged petiole; slightly shiny, glaucous bloom on top and glaucous bloom underneath; lightly corrugated and lightly wavy, broadly ovate, base.

Scape: 21-26 in. (53-66 cm) in length; glaucous green; inflorescence leaves.

Flower: 2.0 in. (5 cm) long, pale lavender; purple striped, translucent margins; tubular; Ann Arbor, MI: 7/19-8/2-8/14 (*codes: 4-4-5).

Seed: sets seeds viability is unknown; pod is green.

Clump History: orig. seedling, 7 years old, Ann Arbor, MI.

Notable Characteristics: glaucous leaves with wavy, yellow rippled edges.

[*H. 'William Lachman'* × *H. hypoleuca*]

H. 'Abbey Pond Cascades' A. Malloy (ONIR)

Plant: medium sized, 31 in. (79 cm) diameter, 18 in. (46 cm) high, mound-like, with a medium growth rate.

Leaf: 11 in. (28 cm) long, 6 in. (15 cm) wide; 11-12 pairs of veins; medium green with a slightly rippled margin and with a green petiole; slightly shiny on top and slightly shiny underneath; moderately wavy, ovate with a rounded base.

Scape: 52-53 in. (132-135 cm) in length; green.

Flower: 1.75 in. (4.4 cm) long, pale lavender; tubular; South Salem, NY: 6/30-7/10-7/24.

Seed: sets viable seeds; pod is green.

Clump History: orig. seedling, 5 years old, South Salem, NY.

Notable Characteristics: tall scapes, buds with darker lavender tips, way edges.

[*H. 'Cascades'* seedling]

H. 'Academy Another' S. Chamberlain (ONIR)

Plant: medium sized, 40 in. (102 cm) diameter, 13 in. (33 cm) high, mound-like, with a medium growth rate.

Leaf: 6 in. (15 cm) long, 3.5 in. (8.9 cm) wide; 8 pairs of veins; medium grayish-green with a slightly rippled pure white 0.25-0.5 in. (0.6-1.3 cm) margin with celadon streaking and with a medium green with thin white edged petiole; dull on top and dull

underneath; lightly cupped and lightly corrugated, ovate with a rounded base.

Seasonal Change: center lights during summer

Scape: 11-18 in. (28-46 cm) in length; medium green.

Flower: 2 in. (5 cm) long, fragrant, pale lavender; no striping; tubular; Manlius, NY: 7/12-7/27-8/2 (*codes: 4-4.5-4.5).

Seed: sets seeds viability is unknown; pod is light green.

Clump History: orig. sport, 8 years old, Manlius, NY.

Notable Characteristics: white-margined, medium green leaves with grayish cast; barely flowers.

[Sport of *H. 'Francee'*]

H. 'Academy Golden Papoose' S. Chamberlain (ONIR)

Plant: medium sized, 30 in. (76 cm) diameter, 12 in. (30 cm) high, mound-like, with a slow growth rate.

Leaf: 8.5 in. (22 cm) long, 6 in. (15 cm) wide; 13 pairs of veins; greenish yellow with a slightly rippled margin and with a greenish-yellow petiole; glaucous bloom on top and glaucous bloom underneath; moderately corrugated and lightly wavy, ovate with a cordate base.

AHS VIRUS POLICY STATEMENT

Hosta viruses have been known to exist since at least 1985. Dr. Ben Lockhart of the University of Minnesota, the leading researcher on viruses in hostas and first to isolate Hosta Virus X, has found four different viruses that are pathogens for hosta. Dr. Lockhart has concluded that plants cannot be cured of viruses, so the best remedy is for any hosta exhibiting a virus to be destroyed. Until recently, and consistent with the research done by Dr. Lockhart and funded by the American Hosta Society, viruses spread slowly and are not easily transmitted in the garden.

However, now there is more frequent appearance of mottled hostas in large general nurseries and “box” stores that sell plants to the public on a large scale. The increase appears to be due to mass propagation of hostas infected with the virus, thus also allowing the virus to be propagated with the plants. This has resulted in a heightened concern about Hosta Virus X.

The American Hosta Growers Association, AHGA, has regularly advised its members of the problem, most notably after the recent increase in hostas exhibiting the virus. “Hosta Virus X, HVX, has been seen in many hostas in bare root stock purchased from Holland . . . especially in plants of ‘Sum and Substance’ and ‘Gold Standard’. Other plants with the virus include ‘Golden Tiara’, ‘Wide Brim’, ‘Birchwood Parky’s Gold’, ‘Diamond Tiara’ and ‘Striptease’.” This is not to say that these plants are the culprits rather that these are the plants that have exhibited the virus and, if they are being purchased, they should be carefully inspected beforehand.

The AHGA recommends that its members do two things if they receive material that appears to have the virus. First, “removal of diseased plants is the best control measure.” Second, “if you have any hostas that are showing symptoms, it is suggested that you notify your supplier. The more complaints, the more pressure we can bring to help get this problem cleaned up quickly. It is also suggested that you ask for your money back and not accept plants next year as replacements.”

This heightened concern has also been seen in recent national publications. In an article in the June 2004 issue of *Fine Gardening*, Bonnie Blanchette (an AHS member who works closely with Dr. Lockhart), described Hosta Virus X as a pest problem on ‘Golden Tiara’. In discussing this article, the AHGA indicates “In the photo, note that the virus discolors the leaf in a different way than it does in gold hostas. (On gold hostas the virus usually produces green streaks.) HVX is becoming more common in hostas, so beware. **Destroy any hostas that show symptoms** and please notify any growers that may have sent you infected plants so that they can clean up their stock.”

There is such interest at present that there is a separate e-mail forum on Hosta Virus X. You can go to Hallson Forums and read about HVX. Use this link – <http://www.hallsongardens.com/forums/viewtopic.php?t=29789>.

Normal symptoms of viruses include irregular blotchy patches of lighter or darker tissue, circular spots with rings around them, and small lighter flecks. Different viruses are spread by the sap of an infected plant coming in contact with an open wound in a clean plant. This can be from tools that were not disinfected between use in dividing plants, or pruning tools used to cut the scapes from different plants without disinfecting them between use. The virus can spread from an animal or insect feeding on an infected plant, then feeding on another plant. A professional diagnosis of plants showing suspicious symptoms would be advisable. From that, the professional should be able to tell you how the particular virus would normally be spread and what other plants may be hosts. Eliminating the infected plant and controlling the potential spread of virus vectors should help preserve the remaining plants.

AHS VIRUS POLICY STATEMENT

We are probably observing more diseases in our hostas than 20 years ago for three reasons. The simple reason is that we are hopefully more aware of the diseases. We may also be inadvertently sharing our plague with our friends if we do not scout out diseases. Remember, some infectious diseases can be difficult to detect, especially when the organisms are present in very low numbers. The other reason is that our hosta gardens have become a more dense population of similar plants. In any situation where population density increases, the chance for infection is greater. If one susceptible individual contracts a disease, it is more easily transmitted to others in a denser population. There is more contact between healthy and diseased individuals. If we each had only two or three hostas in our garden, instead of 200 or 300 or more, we might not have as many diseased plants.

With this background in mind, the purpose of this policy is to persuade our members to do the following:

- A. Understand what virus symptoms look like.
- B. Destroy any infected plants they may have in their collections and not spread the disease.
- C. Quit buying and encouraging sales of virus-infected plants.
- D. Help inform others who may have infected plants that **there is no cure, and that the plants should be destroyed** and not sold.
- E. Quit registering virus-infected plants.

This policy discussion should be featured prominently on the AHS Web site and in The Hosta Journal and mailed to all newsletter editors, regional directors, speakers, Internet lists, and others who relay information to the general membership. We also intend to work closely with the AHGA in monitoring and addressing the virus issue.

- We believe the majority of the sampled plants showing infection have been HVX, but if those plants are not indexed we cannot be sure. What we can easily say is that there are numerous sightings of mottled foliage on hostas, and that FREQUENTLY this is caused by a virus. According to Dr. Lockhart, some plants may remain symptom-less. Some hostas may flip between showing symptoms and not.
- Mottled-leaved hostas should be assumed to be infected with a virus and, even if tested negative, they should always carry that suspicion.
- There is no cure for plant viruses once a plant is infected. Plants do not have any kind of immune systems that can be used to one day eliminate the virus. We cannot expect there will ever be a cure. **Plants that exhibit virus characteristics should be destroyed.**
- Unless the plant owner has a certificate from a certified testing lab that states the plants to be free from viruses after having been tested three times over as many years, plants that exhibit virus symptoms should not be accepted for AHS auction or be sold at sales tables at AHS conventions. This does not mean vendors can't sell plants that exhibit viruses; it just means they can't sell them at AHS functions.
- Virus-infected hosta leaves should not be entered in a Hosta Show to be judged. Leaves that exhibit virus characteristics and that have not been registered as having such patterns may be disqualified by the show chair. Judges should exhibit care in not attributing high "distinction" scores to plants that may be simply exhibiting virus characteristics. However, these plants may be entered in the educational section to educate attendees about

AHS VIRUS POLICY STATEMENT

hosta viruses and what to look for, along with information on the risks associated with planting them in the garden and how to eliminate them from the garden.

- Hostas exhibiting virus characteristics should not be registered without having been tested. As noted by researchers, a plant may not test positive yet still have been infected; i.e., that the virus was not “active” at the time the plants was tested. A virus-free test means you did not get a positive test for that specific virus at that specific time. Thus, if a plant does not test positive for a virus in a given year, it does not necessarily mean it is not infected. It should be required to be tested three times in as many years with the results to be submitted with registration showing the lack of active virus over that period of time. It does not do the registrar, nor the members, any service to register unhealthy plants. While registration is not a certificate of garden worthiness, it does have an implication of such. When a plant appears to be infected with a virus, the registrar should advise the registrant not to be associated with such a plant and recommend that the plant not be registered. Further, the registrar should insert a caveat in the Registration Issue that states something like “this cultivar, both through description and photography, shows many of the symptoms of virus infection.”
- AHS will assemble a package that at least points to available information, including photos of diseased plants, on the Web or in other publications and make this package available to all, either separately or as part of a unified pest and disease package. Further, nurseries and garden centers may be reported to the VP Genus Hosta, who will mail out information to the affected nursery.

Remember no one has gotten rich and become famous from introducing one, or for that matter several, new and exciting hosta that took the world by storm. On the other hand, if that new and exciting mottled hosta that took the world by storm were virused, that introducer could become infamous! Don't panic. This problem is easily removed from the garden and with diligence should not overrun our hosta collections.

INTERNATIONAL REGISTRATION OF HOSTA CULTIVARS

The following is the *minimum* required for registration:

- This form with the front page completed in its entirety.
- One photographic print or slide of the clump, with leaf detail discernable.
- Written permission from the originator if other than the registrant.

The following is optional but strongly requested:

- Any information requested on the back side of the form now or as soon as available.
- A different photo showing leaf detail.
- A \$5 registration fee. Check payable to The American Hosta Society (unpaid fees will be paid by The American Hosta Society).

Forms, fee, photos, etc. should be mailed to: Hosta Registrar, James W. Wilkins, Jr., M.D., 7469 Hunters Ridge, Jackson, MI 49201. Terms used on this form can be found in The American Hosta Society Glossary of Terms. Questions can be answered by calling 517-536-4304 (evenings) or emailing HostaRegistrar@Comcast.net. **Please note:** Un-established cultivar names submitted for registration do not become established until they are published in *The Hosta Journal* accompanied by their description and thus could become established outside of registration prior to that publishing date. **Feel free to photocopy this form for additional copies and distribution.**
