

The Registration process is only as good as the people who register their plants, and the quality of the information that they provide. I want to thank all who have taken the time to make this an informative and educational effort. I especially want to thank Audra and Fred Wilson for making their collection available for use in registering numerous Herb Benedict cultivars, and Ron Kuenster for going to the Wilson garden to fill out the registration forms so that these popular plants could be properly archived. There are 296 new registrations for 2010. There are now a total of 4810 registered hostas.

The effort was further invigorated by Mark Zilis providing both detailed information on many of the heretofore unregistered Paul Aden hostas, and also supplementing the data provided by Rod. The effort was further aided by the in depth research and knowledge of W. George Schmid and Warren Pollock.

The comprehensive index has become excessively long, due to the large number of recent registrations. Therefore, the index will now be published exclusively on-line. This decision may be reevaluated in the future if we receive a substantial number of requests for a hardcopy publication of the Index.

Interim Accepted Cultivars: With the avalanche of Benedict and Aden registrations this year we have registered nearly all the IAC hostas that were once the center of controversy.

Data Base “Errors” (and their correction): I encourage anyone finding what they believe to be errors write me and let me know so that I can research the matter and make appropriate changes to the record.

Where it is a clear typographical error made by the registrar in recording the data, changes can be made with little effort. However, where the data was contained on the original registration form the registrar must first attempt to contact the original registrant to approve the changes. Thus, even though a change should be made as correct information is now known there may be reasons other than the registrar forgetting to make the correction as to why the change was not made, and in fact the registrar may be prohibited from making the changes. Nonetheless, I encourage you to bring any items that do not make sense to you to my attention.

Ploidy: The newest issue we are facing in the Registration area is that of ploidy. A special thanks goes to Ben J. M. Zonneveld who has taken the time to edit my ramblings herein on the subject so that it is coherent to the average reader. The issue has been raised that a few hostas have been registered recently indicating that they may be tetraploid or polyploid. What does this mean?

Polyploid: The occurrence of related forms possessing chromosome numbers which are multiples of a basic number (x), the haploid number. Forms having $3x$ chromosomes are triploids; $4x$, tetraploids; $6x$, hexaploids, and so on. Autopolyploids are forms derived by the multiplication of

chromosomes from a single species. These are distinguished from allopolyploids, which are forms derived from a hybrid between two different species. The polyploidy condition can be induced artificially with chemicals and the production of polyploid individuals has become a valuable tool for plant breeding.

Thus, it has been argued that thick leaf substance is one such indicator of polyploidy – especially when the sport is more heavily substantiated than its parent or when the seedling is more heavily substantiated than either of the parents. At the same time, it has been pointed out that thick leaf substance itself does not necessarily indicate polyploidy.

Clearly thickness alone is not a direct indicator of polyploidy, otherwise, all *H. sieboldiana* types would be tetraploid and they are not. At the same time, when comparing Hosta "A" to its sport, Hosta "B" and discovering that "B" has **noticeably changed** its leaf thickness and is a much different plant from "A", one possible, even likely, explanation is a change in ploidy level. There are many such examples among hostas. Out of ‘Francee’ came thicker-leaved ‘Patriot’ and ‘Minuteman’, both can be tetraploid or polyploid chimeras.

At the same time we are not certain of the ploidy of others, thus, should the registrar allow under the category “**What diagnostic characteristics make this cultivar unique from other hostas?**” such phrasing as: “exhibits thick substance, etc., indicating polyploidy, but designation as tetraploid or ploidy chimera has not been confirmed.”

I have been advised that we should not indicate ploidy unless it has been scientifically determined. That notwithstanding, for the present I am not going to “ban” the use of the term, but will be evaluating its use on a case by case basis, until such time as the evidence provides me with a clear path.

New Form Attached: The good news is that about one-half of you read this Introduction and consequently used the new form and only 2 failed to notice the **NEW DEADLINE of November 1 for submitting registrations**, but both of those were still late based upon the old date. I have accommodated all the submissions received but will likely not be so generous in the future. Keep in mind the registrar should be allowed to enjoy a holiday season too.

Plant Patents, Plant Breeder’s Rights and Establishment:
Article 28.2 of the *Code*:

“the name of a cultivar accepted and published by a statutory plant registration authority, even if using alternative terminology must not be rejected under the provisions of this *Code*.”

In keeping with this provision, included on page 42 is a table of hostas that have been processed under one of these pieces of legislation. The table also indicates which have already been registered. Those which have not been registered have been established and thus, those names although, not registered, are not available for use by any other person. Of note, of the 84 cultivars granted these other protections (of which 2 have since expired), 70 are already registered. Thus, it is reas-

sureing that most still feel the registration process is as valuable, if not more so, as the legal protections afforded by certain jurisdictions.

Plant Patent Applied For (“PPAF”): The U.S. Patent Office now only publishes patent applications if the applicants request that the filings be published. Otherwise applications are not available until the patents are granted, when patent numbers with dates are issued. On occasion people registering hostas intended to file for plant patents, but then did not. This has resulted in the Hosta Registry incorrectly representing some hostas as PPAF. Thus starting in 2010, the DATES of the actual U.S. patent application filings must be supplied to the registrar by the hosta registrants for their plants to be listed as PPAF. Note that PPAF does not necessarily mean a U.S. plant patent is forthcoming. The Patent Office may determine the application not patentable or the application may be abandoned.

Measurements: An interesting issue has arisen regarding leaf size measurements and rounding when comparing data accessed through the online database and what was published in the Registration Issue. The hosta in question was ‘Frosted Mouse Ears’ (My! How all these mouse ears are mischievous!). Well, in programming the online database we thought we were doing all a favor rounding the leaf sizes to the nearest inch size and the centimeters to the nearest centimeter.

When searched on-line the description states: Leaf: 3 in. (6 cm) long; 2 in. (6 cm) wide, thus a slightly oblong leaf becomes a round leaf in transitioning from imperial to metric measurement. How could this be and if it were 3 by 2 it would be more like 7.5 cm by 5 cm. again rounding as (1 inch = 2.54 cm). So what was happening to make this absurdity. Well the measurement as registered was 2.5 in. long, and 2.25 in. wide. Thus, under standard conventions 2.5 in. rounds UP to 3 in. and 2.25 rounds DOWN to 2, as in the 3 by 2 shown by the computer. The program then looks at the cm and sees that for 2.5 inches the metric is 6.4 cm, and for 2.25 it is 5.7 cm. The result when we ask the computer to round those two metric numbers to full cm, the 5.7 rounds UP to 6, and the 6.4 rounds DOWN to 6. Wow! So for small leaves the rounding creates this anomaly, which we are now working on trying to resolve without breaching the other statistical conventions about too many significant digits. Ain’t science fun?

Corrections: 1987 Registration: *H.* ‘Tambourine’ Leaf size was incorrectly listed as 6 in. (15.2 cm) long, 15 in. (38.1 cm) wide. Leaf size should have been 15 in. (38.1 cm) long; 6 in. (15.2 cm) wide.

1992 Registration: *H.* ‘Fishers Cream Edge’. Under the 1995 code revisions it should have been re-,registered as *H.* ‘Fisher’s Cream Edge’ to include the apostrophe, giving it a possessive phrasing.

1996 Registration: *H.* ‘Go For Broke’. This name was registered incorrectly. It should have been registered as *H.* ‘Go for Broke’.

2000 Registration: *H.* ‘Wizard’s Turbin’. This name was registered incorrectly. It should have been registered as *H.* ‘Wizard’s Turban’.

2000 Registration: *H.* ‘Dapra’s Delight’. This name was registered incorrectly. It should have been registered as *H.* ‘DaPra’s Delight’.

2000 Registration: *H.* ‘DaPra’s Delight’ (as corrected above). This was registered with the name of the originator and registrant misspelled as Dapra. It should have been DaPra.

2000 Registration: *H.* ‘Orphan Child’. This was registered with the name of the registrant and introducer misspelled as Dapra. It should have been DaPra.

2000 Registration: *H.* ‘Sunrise Crinkles’. This was registered with the name of the originator, nominant, introducer, and registrant misspelled as Dapra. It should have been DaPra.

2002 Registration: *H.* ‘ZZZZ, a Sleeping Beauty’. This name was registered incorrectly. It should have been registered as *H.* ‘ZZZZ, A Sleeping Beauty’.

2002 Registration: *H.* ‘Lovey Dovey’ Leaf size was incorrectly listed as 2 in. (5.1 cm) long, 2.5 in. (6.4 cm) wide. Leaf size should have been 2.5 in. (6.4 cm) long; 2 in. (5.1 cm) wide.

2007 Registration: *H.* ‘Clementine’. This was registered with the name of the originator misspelled as Huseman. It should have been Husemann.

2009 Registration: *H.* ‘Prairie Sum Shine’. This was registered with its geographic origin misspelled as Champagne, IL. It should have been Champaign, IL.

2009 Registration: *H.* ‘Appletini’. This was registered with incorrect information stating that there were red bracts on the petiole. It should have said “reddish bracts subtend the flowers.”

2009 Registration: *H.* ‘Bunchuko’. This name was registered incorrectly. It should have been registered as *H.* ‘Bunchoko’.

2009 Registration: *H.* ‘Enduring Endeavor’. This name was registered incorrectly. It should have been registered as *H.* ‘Endearing Endeavor’.

2010 REGISTRATIONS

H. 'A Dog of Flanders' H. Philips (ONIR)
Plant: 35.4 in. (90 cm) diameter; 11.8 in. (30 cm) high; mound-like; fast growth rate.
Leaf: 10.6 in. (27 cm) long; 4.3 in. (11 cm) wide; 10 vein pairs; medium green; slightly rippled; dull on top, very shiny underneath, lance with a tapered base; brownish-red petiole.
Scape: 27.6 to 35.4 in. (70 to 90 cm) long.
Flower: 2.2 in. (5.5 cm) long; medium lavender; striped; tubular; Brasschaat, Belgium; Aug. 1 to Aug. 30.
Seed: sets viable seeds; pod dark green, brown dots.
Clump History: original seedling; 5 years old; Brasschaat, Belgium. [H. 'Katsuragawa Beni' × unknown]

H. 'Abana' D. Dupre (ONIR)
Plant: 19.7 in. (50 cm) diameter; 11.4 in. (29 cm) high; mound-like; medium growth rate.
Leaf: 5.9 in. (15 cm) long; 3.1 in. (7.9 cm) wide; 9 to 10 vein pairs; yellow; .4 to .9 in. (.9 to 2.2 cm) slightly rippled, dark green margin; very shiny on top, slightly shiny underneath; lance with a tapered base; lightly wavy; red dots at base of petiole.
Scape: 21.7 to 23.6 in. (55 to 60 cm) long; green.
Flower: 1.8 in. (4.5 cm) long; medium lavender; Asper, Belgium; 7/10-8/1-9/10.
Seed: sets seeds, viability is unknown; pod green.
Clump History: 4 years old; Asper, Belgium.
Notable Characteristics: wider edge and thicker texture than parent plant.
 [sport of H. 'Chinese Sunrise']
Seasonal Variation: center changes from intense yellow to green as season progresses.

H. 'Abba Diana Reeck' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 30 in. (76.2 cm) diameter; 14 in. (35.6 cm) high; mound like; slow growth rate.
Leaf: 6.5 in. (16.5 cm) long; 4.375 in. (11.1 cm) wide; 10 vein pairs; creamy white; 1.375 in. (3.5 cm) wide, flat, dark green margin; slightly shiny on top; broadly ovate with a rounded base; intensely wavy.
Scape: 18 in. (45.7 cm) long; greenish white.
Flower: pale lavender; tubular; Baldwin, NY; 7/5-7/12-7/18.
Seed: seed set unknown.
Clump History: original; 5 years old; Baldwin, NY. [parentage unknown]

H. 'Abba Double Header' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 25 in. (63.5 cm) diameter; 12 in. (30.5 cm) high; mound like; medium growth rate.
Leaf: 7 in. (17.8 cm) long; 4 in. (10.2 cm) wide; 9 to 10 vein pairs; white; 1.5 in. (3.8 cm) wide, flat, medium green margin; dull on top; ovate with a rounded base; lightly wavy, lightly corrugated.
Flower: pale lavender; Baldwin, NY; June 1 to July 15.
Seed: seed set unknown.
Clump History: original; 5 years old; Baldwin, NY. [parentage unknown]

H. 'Abba Flower Mound' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 22 in. (55.9 cm) diameter; 10 in. (25.4 cm) high; mound like; slow growth rate.
Leaf: 6 in. (15.2 cm) long; 3 in. (7.6 cm) wide; 6 to 7 vein pairs; creamy white; 1 in. (2.5 cm) wide, flat, medium green margin; dull on top; lance to ovate with a rounded base; lightly wavy.
Scape: creamy white.
Flower: pale lavender; tubular; Baldwin, NY; 7/5-7/12-7/18.
Seed: seed set unknown.
Clump History: original; 5 years old; Baldwin, NY. [parentage unknown]

H. 'Abba Fragrant Backscratcher' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 40 in. (101.6 cm) diameter; 18 in. (45.7 cm) high; vase-shaped; medium growth rate.
Leaf: 10.5 in. (26.7 cm) long; 7.75 in. (19.7 cm) wide; 11 vein pairs; medium green; 1 in. (2.5 cm) wide, flat, creamy white margin; slightly shiny on top; ovate with a cordate base; lightly wavy.
Scape: 36 in. (91.4 cm) long; green.
Flower: pale lavender; Baldwin, NY; 7/5-7/12-7/18; fragrant.
Seed: seed set unknown.
Clump History: original; Baldwin, NY. [parentage unknown]
Seasonal Color: margin yellow in spring.

H. 'Abba Irresistible' P. Aden (ONI), AHS, M. Zilis (R)
Plant: 28 in. (71.1 cm) diameter; 10 in. (25.4 cm) high; mound-like; slow growth rate.
Leaf: 5.25 in. (13.3 cm) long; 3 in. (7.6 cm) wide; 6 vein pairs; creamy white; .5 to .75 in. (1.3 to 1.9 cm) flat, dark green margin; satiny on top, dull underneath; ovate with a cordate base; lightly wavy; lightly corrugated.
Scape: 20 to 27 in. (50.8 to 68.6 cm) long; creamy white;
Flower: 2.125 (5.4 cm) long; pale purple; tubular to bell; Bridgeville, DE; 7/5-7/15-7/20.
Seed: seed set unknown.
Clump History: division obtained from other source; 10 years old; Bridgeville, DE. [parentage unknown]

H. 'Abba Ready' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 40 in. (101.6 cm) diameter; 18 in. (45.7 cm) high; mound like; medium growth rate.
Leaf: 8 in. (20.3 cm) long; 6 in. (15.2 cm) wide; 9 to 11 vein pairs; medium green; .5 in. (1.3 cm) wide, slightly rippled, creamy white margin; slightly shiny on top and underneath; ovate with a cordate base; lightly wavy.
Flower: pale lavender; Baldwin, NY; fragrant; July 15 to Aug. 15.
Seed: seed set unknown.
Clump History: original; 5 years old; Baldwin, NY. [sport of H. 'Invincible']

H. 'Abba Rough' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 40 in. (101.6 cm) diameter; 17 in. (43.2 cm) high; mound like; slow growth rate.
Leaf: 10.5 in. (26.7 cm) long; 9 in. (22.9 cm) wide; 14 vein pairs; intensely blue-green; flat margin; glaucous bloom on top and underneath; very broadly ovate with a cordate base; moderately wavy, heavily corrugated.
Flower: near white; tubular; Baldwin, NY; June 1 to July 15.
Seed: seed set unknown.
Clump History: original; 5 years old; Baldwin, NY.
Notable Characteristics: medium large, heavily corrugated, blue-green foliage. [purportedly out of H. 'Tokudama']

H. 'Abba Soul Mate' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 20 in. (50.8 cm) diameter; 8 in. (20.3 cm) high; mound like; slow growth rate.
Leaf: 5.5 in. (14 cm) long; 3 in. (7.6 cm) wide; 10 vein pairs; slightly blue-green; .5 in. (1.3 cm) wide, flat, intensely blue-green margin; glaucous bloom on top and underneath; ovate with a rounded base; lightly wavy.
Flower: Baldwin, NY; July 15 to Aug. 15.
Seed: seed set unknown.
Clump History: original; 5 years old; Baldwin, NY. [sport of H. 'Halcyon']

H. 'Abba Windows' P. Aden (ONI), M. Zilis, AHS (R)
Plant: 30 in. (76.2 cm) diameter; 14 in. (35.6 cm) high; mound like; slow growth rate.
Leaf: 8 in. (20.3 cm) long; 7.5 in. (20 cm) wide; 8 to 10 vein pairs; chartreuse with long white lines, creating an unusual grayish chartreuse color; 3 in. (7.6 cm) wide, flat, medium gold margin; slightly shiny on top, glaucous bloom underneath; nearly round with a cordate base; moderately wavy.
Flower: pale lavender; Baldwin, NY; July 15 to Aug. 15.
Seed: seed set unknown.
Clump History: original sport; 4 years old; Baldwin, NY.
Notable Characteristics: distinctive grayish green, center color with white lines; center very thick substanced.
 [sport of *H.* 'Sum and Substance']
Seasonal Color: margin chartreuse in the early season.

H. 'Akane' Gotemba Nursery (ONI) P. & J. Ruh (R)
Plant: 32 in. (81.3 cm) diameter; 19 in. (48.3 cm) high; upright; medium growth rate.
Leaf: 8 in. (20.3 cm) long; 5.5 in. (14 cm) wide; 8 vein pairs; medium green; slightly rippled margin; satiny on top, very shiny underneath; ovate with a flat base; folded, wavy; reddish near base, winged, long petiole.
Scape: 25 in. (63.5 cm) long; dark green; translucent edge, striped tubular; Chesterland, OH; 7/22-8/1-8/10.
Seed: sets viable seeds.
Clump History: division obtained from other source; 10 years old; Chesterland, OH.
Notable Characteristics: its flower; striped burgundy red with a white edge
 [parentage unknown]

H. 'Andrew Dennis' P. Aden (O), H. Weissenberger (NI) M. Zilis, AHS (R)
Plant: 46 in. (116.8 cm) diameter; 23 in. (58.4 cm) high; mound like; medium growth rate.
Leaf: 8 in. (20.3 cm) long; 5.625 in. (14.3 cm) wide; 9 to 11 vein pairs; medium blue-green; .125 in. (.3 cm) wide, flat, creamy white margin; glaucous bloom on top and underneath; ovate with a rounded base; lightly wavy, moderately corrugated.
Seed: seed set unknown.
Clump History: original; Baldwin, NY.
Notable Characteristics: distinct white margins.
 [parentage unknown]
Seasonal Color: margin yellow early; center becomes dark green by August.

H. 'Andrew's Moody Mom' F. Freeman (ONIR), A. Wolfe (NIR)
Plant: 39 in. (99.1 cm) diameter; 17 in. (43.2 cm) high; upright; medium growth rate.
Leaf: 12 in. (30.5 cm) long; 7.5 in. (19.1 cm) wide; 13 vein pairs; dark blue-green; slightly rippled margin; slightly shiny on top, dull underneath; broadly ovate with a cordate base; moderately wavy, moderately corrugated.
Scape: 29 to 30 in. (73.7 to 76.2 cm) long; green.
Flower: 2.5 in. (6.4 cm) long; pure white; bell; Davenport, IA; 7/1-7/10-7/14.
Seed: sets viable seeds; pod green.
Clump History: original seedling; 4 years old; Davenport, IA.
 [parentage unknown]

H. 'At Attention' H. & D. Benedict (ONI), R. Kuenster, AHS (R)
Plant: 42 in. (106.7 cm) diameter; 20 in. (50.8 cm) high; mound like; medium growth rate.
Leaf: 9.5 in. (24.1 cm) long; 6.5 in. (16.5 cm) wide; 9 to 11 vein pairs; light green; slightly rippled margin; slightly shiny on top and

underneath; broadly ovate with a cordate base; lightly cupped, lightly twisted, moderately wavy.
Scape: 26 to 32 in. (66 to 81.3 cm) long; green.
Flower: pale lavender; Ackworth, IA; Aug 15 to Oct 1.
Clump History: division of the original obtained from the originator; 12 years old; Ackworth, IA.
Notable Characteristics: twisted pointy leaves.
 [parentage unknown]

H. 'Autumn Joy' H. & D. Benedict (ONI), R. Kuenster, AHS (R)
Plant: 32 in. (81.3 cm) diameter; 21 in. (53.3 cm) high; mound like; fast growth rate.
Leaf: 9 in. (22.9 cm) long; 3.25 in. (8.3 cm) wide; 5 to 7 vein pairs; medium green; slightly shiny on top and underneath; lance with a cordate; lightly wavy; long green petiole.
Scape: 25 to 28 in. (63.5 to 71.1 cm) long; green.
Flower: 1.75 in. (4.4 cm) long; pale lavender; tubular; Ackworth, IA; 8/30-9/15-9/28.
Clump History: division of the original obtained from the originator; 12 years old; Ackworth, IA.
Notable Characteristics: long narrow leaves, slightly wavy edge.
 [parentage unknown]

H. 'Awesome' H. & D. Benedict (ONI), R. Kuenster, AHS (R)
Plant: 4 in. (10.2 cm) diameter; 2.5 in. (6.4 cm) high; upright; slow growth rate.
Leaf: 3 in. (7.6 cm) long; 1.5 in. (3.8 cm) wide; 3 to 5 vein pairs; medium green; flat margin; dull on top and underneath; lance with a tapered base; moderately flat; petiole has some red speckling.
Flower: lavender; Ackworth, IA; June 1 to July 15;
Clump History: division of the original obtained from the originator; 12 years old; Ackworth, IA.
Notable Characteristics: very small in size.
 [parentage unknown]

H. 'Azure Frills' M. Zilis (ONIR)
Plant: 33 in. (83.8 cm) diameter; 15 in. (38.1 cm) high; semi-upright; fast growth rate.
Leaf: 9 in. (22.9 cm) long; 6 in. (15.2 cm) wide; 9 to 11 vein pairs; intensely blue-green; heavily rippled; glaucous bloom on top and underneath; ovate with a flat base; lightly wavy.
Scape: 12 to 20 in. (30.5 to 50.8 cm) long; green.
Flower: 2.75 in. (7 cm) long; pale purple; medium purple mid petal; tubular; Rochelle, IL; 7/7-7/14-8/3.
Seed: sets viable seeds; pod green.
Clump History: original seedling 6 years old; Rochelle, IL.
Notable Characteristics: heavily frilled, rippled, blue-green leaves.
 [*H.* 'Venetian Blue' open pollinated]
Seasonal Color: medium green by mid-July.

H. 'Baby Blue' H. & D. Benedict (ONI), R. Kuenster, AHS (R)
Plant: 14 in. (35.6 cm) diameter; 6 in. (15.2 cm) high; mound like; slow growth rate.
Leaf: 5 in. (12.7 cm) long; 3 in. (7.6 cm) wide; 6 to 8 vein pairs; medium blue-green; flat margin; slightly shiny with glaucous bloom on top and underneath; ovate with a tapered base; lightly cupped; short, blue-green petiole.
Scape: 10 to 12 in. (25.4 to 30.5 cm) long; blue-green.
Flower: 1.25 in. (3.2 cm) long; near white; tubular; Ackworth, IA; 6/20-7/10-7/20.
Seed: sets seeds, viability is unknown; pod green.
Clump History: division of the original obtained from the originator; 12 years old; Ackworth, IA.
Notable Characteristics: small blue with pointed leaves, good substance.

2010 REGISTRATIONS

H. 'Baja White' M. Zilis (OR), J. Spece (NI)
Plant: 28 in. (71.1 cm) diameter; 10 in. (25.4 cm) high; mound-like; medium growth rate.
Leaf: 6 in. (15.2 cm) long; 4.5 in. (11.4 cm) wide; 9 to 11 vein pairs; dark green; flat margin; very shiny on top, glaucous bloom underneath; ovate with a flat base; lightly wavy.
Scape: 16 in. (40.6 cm) long; green.
Flower: pale purple; tubular; Rochelle, IL; 8/1-8/10-8/20
Seed: sets viable seeds
Clump History: original sport; 4 years old; Rochelle, IL.
Notable Characteristics: small mound of shiny, dark green foliage with white undersides; late season flowers.
 [sport of *H.* 'Oshima Silk']

H. 'Bashful Polly' H. & D. Benedict (ONI), R. Kuenster, AHS (R)
Plant: 24 in. (61 cm) diameter; 24 in. (61 cm) high; upright; slow growth rate.
Leaf: 12 in. (30.5 cm) long; 11.5 in. (29.2 cm) wide; 14 to 16 vein pairs; streaked greenish yellow, golden yellow and creamy white; slightly rippled margin; glaucous bloom on top, dull underneath; nearly round with a cordate base; lightly cupped, lightly wavy, moderately corrugated; yellow edge on the petiole.
Scape: 32 to 36 in. (81.3 to 91.4 cm) long; green.
Flower: 1.875 in. (4.8 cm) long; near white; bell; Ackworth, IA; 6/20-7/1-7/30.
Seed: sets viable seeds; pod some streaking.
Clump History: division of the original obtained from the originator; 12 years old; Ackworth, IA.
Notable Characteristics: large streaked plant with nice colors, a good breeder.
 [*H.* 'Dorothy Benedict' selfed]

H. 'Beautiful Dreamer' D. & J. Ward (ONIR)
Plant: 30 in. (76.2 cm) diameter; 13 in. (33 cm) high; mound-like; medium growth rate.
Leaf: 6 in. (15.2 cm) long; 4 in. (10.2 cm) wide; 7 vein pairs; medium green; 1 in. (2.5 cm) flat, pure white margin; dull on top and underneath; broadly ovate with a cordate base.
Scape: 20 in. (50.8 cm) long; green.
Flower: .75 in. (1.9 cm) long; near white; tubular; Columbus, OH; 7/4-7/16-7/25.
Seed: sets seeds, viability is unknown; green.
Clump History: original seedling; 3 years old; Columbus, OH.
Notable Characteristics: striking white margin.

2010 REGISTRATIONS

Re-Registration: Over the past 5 years many have written, emailed or called me to let me know that that the registration data for Cultivar “ABC” was not accurate and that I must have entered it incorrectly.

As reported in the 2009 Registration Issue, you have informed me that:

[T]wo hostas, specifically *H.* ‘Big Daddy’ and *H.* ‘Blue Cadet’ must have some incorrect information in the database or in the published registrations as the hosta being sold under both of those names throughout the industry has no variegation, but the registration records indicate it should be variegated.

I checked the original registration filing made for each and, in fact, both were truly registered as being variegated. Nonetheless, what is being sold, and has been sold since the early 1990s is not variegated. The conclusion that has been reached is that after they were registered the plant was tissue cultured and lost the variegation in tissue culture and what has been sold since is not variegated. Stay tuned as I am in the process of assessing what should be done to correct this.

Similarly on another leaf measurement problem that regularly arises, especially regarding *H.* ‘Wide Brim’. I have been revisiting database measurement issues, and looking at the original documents to determine possible transposition errors. In so doing it has come to my attention that the leaf lengths for the several hostas are only possible if the registrant measured the petioles too! (They are not misplaced decimal points as I tried to make that work out):

Thus, thanks in large part to Mark Zilis’ data collection efforts that have resulted in his books and his willingness to share his data with me and my exercising the authority under the ICNCP to make corrections where there are clear errors, I am re-registering the hostas contained in the following table.

The first column represents the data as submitted by the hybridizer in registering the named cultivar and have been checked against the actual data "card" or application submitted, a file search for any corrections being published, etc., and thus represent the submitted registration. The second column reflects the marketed plant as recorded, in many case at several locations across the country, and reflects the plant as grown under appropriate conditions.
