

The registration process is only as good as the people who register their plants, and the quality of the information that they provide. I want to thank all who have taken the time to make this an informative and educational effort. There are 125 new registrations for 2014; for a total of 5460 registered hostas.

The effort continues to be invigorated by the in-depth research and knowledge of W. George Schmid, and Warren Pollock.

As was announced three years ago, the comprehensive index has become excessively long, due to the large number of recent registrations. Therefore, **the index will be published exclusively online.**

Name Reservation: The International Code of Nomenclature for Cultivated Plants ("ICNCP" or "Code") has no provision for name reservations and each plant society has developed its own policy. To alleviate any further confusion, The American Hosta Society ("AHS") has adopted a formal policy on name reservation.

New AHS Name Reservation Policy:

A hosta cultivar name can be reserved with the AHS Registrar. The reserved name does not require descriptive information, will be protected for a one time period of three years from date of receipt, and requires paying a \$10 reservation fee. The reserved name may not be displayed in gardens nor used in print before registration with the AHS and Registrar publication. A maximum of 6 cultivar name reservations may be held concurrently by a registrant.

If the name was established under the ways allowed under the Code, such as a Plant Patent, that would supersede any reservation. Thus, again a reservation is NOT a guarantee, simply a place holder until you get your paperwork in, and then hope that you are first with the paperwork and there is no Plant Patent or Plant Breeder's rights established. Further, you should note there are some other ways of establishing that could also supersede a reservation, but those are so detailed that they will be left to the operation of the Registrar and the Nomenclature Committee.

For example a nursery catalogue might be sufficient to establish a name such that no one else could register a plant using that name. The guidance that has been published which accompanies the Code states:

"The description can be brief but it is most useful if it makes clear how the new cultivar differs from others. Many cultivars are first described in nursery catalogues but magazines, newsletters and other publications are equally valid **as long as they are publicly distributed and generally available** (emphasis added). Where a catalogue is only available online effective publication can still be made by printing off at least two copies and lodging them with a designated library."

This is allowed but note there are two caveats, generally electronic catalogues themselves are insufficient to achieve establishment, and further, if electronically published, at least two ("hard") copies must be printed and lodged with a designated library. (Designated here means a regularly recognized horticultural library – usually one that maintains herbarium specimens.) Secondly, the key phrase above highlighted but bears repeating: **"as long as they are publicly distributed and generally available."** Some catalogues, especially those that go to thousands of people and to people beyond just the AHS roster would probably comply, but I am hard pressed to consider most hosta catalogues widespread, or generally available. Thus the need for the Registrar in consultation with the Nomenclature Committee is evident in borderline circumstances.

Data Base "Errors" (and their correction): Again, I encourage anyone finding what is believed to be errors to write me and let me

know so that I can research the matter and make appropriate changes to the record.

To clarify matters as many have asked, where it is a clear typographical error made by the registrar in recording the data, changes can be made with little effort. However, where the data was contained on the original registration form the registrar must first attempt to contact the original registrant to approve the changes. Thus, even though a change should be made as correct information is now known there may be reasons why the change was not made, and in fact the registrar may be prohibited from making the changes. Nonetheless, I encourage you to bring any items that do not make sense to you to my attention.

Also please note: Originators for hostas registered by Paul Aden have been clarified in the online AHS Registry.

Plant Patents, Plant Breeder's Rights and Establishment: Article 31.2 of the Code (8th Edition; 2009) under Article 31. Rejection of Names: "... the name of a cultivar accepted and published by a statutory plant registration authority, even if using alternative terminology must not be rejected under the provisions of this Code."

In keeping with this provision, included on pages XX to XX is a table of hostas that have been processed under one of these legislative authorities. The table also indicates those which have already been registered. Those which have not been registered have been established and thus, those names although, not registered, are not available for use by any other person. Of note, of the 115 cultivars granted these other protections (of which 4 have since expired), 87 are already registered. Thus, it is reassuring that most still feel the registration process is as valuable, if not more so, as the legal protections afforded by certain jurisdictions.

Plant Patent Applied For ("PPAF"): The U.S. Patent Office now only publishes patent applications if the applicants request that the filings be published. Otherwise applications are not available until the patents are granted, when patent numbers with dates are issued. On occasion people registering hostas intended to file for plant patents, but then did not. This has resulted in the Hosta Registry incorrectly representing some hostas as PPAF. Thus starting in 2010, the DATES of the actual U.S. patent application filings must be supplied to the registrar by the hosta registrants for their plants to be listed as PPAF. Note that PPAF does not necessarily mean a U.S. plant patent is forthcoming. The Patent Office may determine the application not patentable or the application may be abandoned.

Corrections and Additions: Immediately following registrations on page 18.

Thanks: The editing of W. George Schmid and Warren Pollock is acknowledged and greatly appreciated. Further, portions of the above introduction have been excerpted from various emails between them and me.

Corrections and Additions:

H. 'Andy Murray' (2013) – was registered as having a hosta known as 'Longianabue' in its parentage. It should have been written as 'Longiana Blue'. In addition, a typo has been corrected to read "lightly folded." Finally, "Notable Characteristics" has been edited to read: "variegated form of hosta known as 'Longiana Blue' with an irregular, broad cream to white margin jetting towards the midrib, random golden yellow flashes can appear near the leaf edge."

H. 'Bridal Falls' (2012) – was registered with its parentage as [Sport of unknown parent]. It should have been [Sport of *H. 'Niagara Falls'*]

H. 'Gitchigumi' (2009) – was registered with "shiny underneath". It should have been "glaucous bloom underneath."

H. 'Greenhead Charlie's Pride' (2009) was registered with the center color missing it should have indicated that it has an "intensely bluish" center.

H. 'Jezebel' (2013) – Due to a typographical error on the part of the registrar this was incorrectly registered with the incorrect nominant. The nominant should have been M. McHugh.

H. 'Leapin' Lizard' (2012) and **H. 'Leapin' Lizerd'** (2013) The hybridizer submitted two registrations in subsequent years under slightly different spellings of the name which slipped by review. As the hosta was already registered the 2013 version should be deleted and all reference revert back to the 2012 registration.

H. 'Michael's Mud Pie' (2002) – This was registered as blue-green and the registrant has indicated it has stabilized to a waxy green, and is so noted.

H. 'Solar Mouse' (2013) – This was registered as having parentage of sport of an unregistered sport of *H. 'Blue Mouse Ears'*. After much debate, and in the interests of providing as much information as possible regarding parentage, it was determined that the actual name of the parent from which the cultivar was derived, albeit unregistered, would be more accurate and thus, the parentage has been changed to sport of *H. 'Funny Mouse'*.

H. 'Sterling Medallion' (2012) – The Introducer (I) was listed a D. Dean and should have been AHS.

H. 'Zypunic Finale' (2013) – This was registered without a margin and the hybridizer has since indicated that it has a white, .75 inch margin.

Also please note: Originators for hostas registered by Paul Aden have been clarified in the online AHS Registry.
